Description	An externally threaded fastener with a dome-shaped head and an integrally formed washer; a recess that can accomodate a Six-lobe screwdriver; and a single lead thread. The shank has a reduced diameter and a chip cavity cut out where the final several threads, ending at the tip that is 30% to 50% longer than a normal Type-17 point.					
Applications / Advantages	The deeper thread design offers greater resistance to pull-out forces. The round washer head is preferable in softer woods and offers a greater bearing surface than a countersunk design. The extra long chip cavity is preferable for use in thicker woods when a greater amount of material will be displaced.					
Material	C1018 - C1022 case-hardened steel					
Surface Hardness	Rockwell C 45 minimum					
Case Depth	0.004" - 0.009"					
Torque	45 kg/cm minimum					
Plating	See Appendix-A for plating information
